Overview

Purpose

To help curious people and stargazers discover upcoming celestial events — lunar cycles, eclipses, auroras, and meteor showers — with clear, jargon-free explanations so anyone can look up and know exactly what they're seeing.

Audience

Curious everyday people of all ages, from complete beginners who have never stargazed to hobbyist astronomers, who want to connect with the night sky without needing specialized equipment or prior knowledge.

Sky Events Page (sky-events.html)

What's in the Sky
Browse and filter upcoming celestial events

- Filterable event list by category: Lunar, Solar, Aurora, Meteor Shower
- Each event card: title, date and time, visibility region, plain-language description
- Search bar for finding specific events by name or date

Learn Page (learn.html)

Understand What You're Seeing

Plain-language guides — no science background required

- Lunar Phases Explained — Why the moon looks different every night
- How Eclipses Work — Solar and lunar eclipses demystified
- What Causes Auroras — Charged particles and the night sky
- Your Meteor Shower Guide — How to watch, when to watch, what to expect

All content written in plain language accessible to ages 10 and up.

Images Needed:

- Night sky panorama (hero background)
- Blood moon / total lunar eclipse close-up
- Northern Lights / Aurora Borealis over a landscape
- Meteor shower streaks across a dark sky
- Moon phase cycle diagram
